18. Does your child consume much candy or many sweetened beverages? Y / N
19. Does your child take a pacifier or does he/ she suck his /her thumb? Y / N

Today, caries is an almost 100% avoidable illness. We would like to help you teaching your child at an early age, why good oral care is important and which kind type of care is healthy for the teeth. At the age of 6, our patients attend „tooth brushing classes. During this class, we will discuss individually optimal tooth care with you and your child. A little practice will be done and if necessary, the teeth will be sealed.

Our practice uses an appointment system. This means that we reserve a particular appointment for your child. If you do come to the appointment we previously agreed upon, we will charge you 50€. If a dental appointment including anesthesia is not being kept, we will charge you 200€. For this reason, please cancel appointments, which cannot be kept, at least 24 hours in advance, so our office can reschedule that time.

Furthermore, my child will receive the necessary treatments, including X- ray which was previously discussed with Ms. Dr. von Gymnich / Ms. Dr. Herbrig / Ms. Dr. Meißner / Ms. Dr. Sarah Haas / Ms. Dr. Julia Scholz /Dentist Ms. Caro Weigl or our qualified dental employees.

I have read the information and declare my consent.
